

Global and regional connectivity solutions

Providing mobility services to the maritime world

KEY BENEFITS

- Large range of packages ranging from 256/128 kbps to 2048/512 kbps with CIR from 32/32 kbps up to 256/256 kbps
- Unique Network Operating Control (NOC)
- Remote diagnosis via remote back-door functionality

BUSINESS AND LEISURE USAGE

- VoIP and GSM telephony, fax or data communications
- Connections to corporate networks or to the internet

BROADBAND APPLICATION:

- Videoconferencing
- Entertainment
- Internet

Eutelsat satellite connectivity delivers global and regional solutions to a diverse range of markets that includes commercial shipping sea-based oil and gas operations, governmental ships, cruisers, ferries and yachting. As a satellite operator we have total flexibility on bandwidth requirements. Globally, via our own resources and through partnerships with other satellite operators, we provide fleets and individual vessels with the connectivity and infrastructure they need wherever they need it.

GLOBAL ACCESS

Eutelsat Global Access is based on broadband services using Ku-band VSATs with one-meter antennas. Through the Global Network Management Systems (GNMS), the location and communication status of the VSAT system on-board vessels is continuously monitored by servers located in the shore station. Our Global Access services are available through a network of partners. The client is directed to the most suitable reseller according to their needs and location.

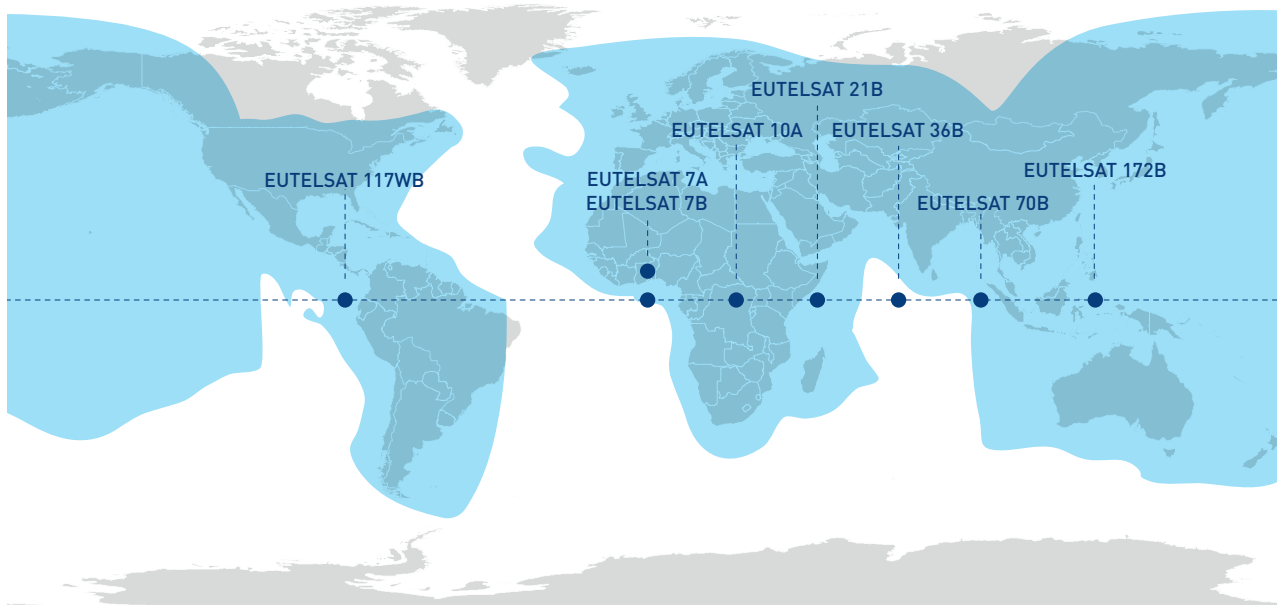

REGIONAL CONNECT

Eutelsat has pioneered the development of today's maritime telecommunications and continues to invest in new technologies and in-orbit resources. Our VSAT Regional Connect solutions provide corporate class networking services, tailored to specific requirements for a fleet of vessels. We offer flexibility on bandwidth requirement on a regional basis. A large range of technologies, including SCPC and DVB-S2/TDMA, provide efficient and reliable connectivity to the fleet. Our maritime offer is available on our fleet of satellites which provides a powerful and extensive coverage for maritime services.
