EUTELSAT 10A

DUAL BAND CAPACITY FOR DATA AND PROFESSIONAL MARKETS

Ku and C-band capacity at a key location

EUTELSAT 10A carries a powerful payload of Ku-band capacity, while also boosting C-band capacity available through Eutelsat’s fleet for services across Africa. The satellite is located at 10 degrees East, one of Eutelsat’s long-standing orbital locations and a key position for data and professional video networks. Services have been continuously provided at this location since 1987.

The Ku-band payload on EUTELSAT 10A offers an enhanced Widebeam footprint serving Europe, North Africa and the Middle East. A second Ku-band beam serves southern Africa and Indian Ocean islands, and enables connectivity between Africa and Europe. The C-band payload provides pan-African coverage, extending to India and parts of Asia as well as Latin America, for broadband and telecommunications services.
