EUTELSAT 115 WEST B

POWERING THE FUTURE

New capacity in Ku and C-band for the Americas

Located at 114.9° West, EUTELSAT 115 West B extends our satellite coverage from Alaska and Canada down to South America, with unique coverage over the Galapagos and Easter Island.

Ku-band resources, connected to three fixed beams covering the Americas from Alaska to Patagonia, provide optimised regional coverage of Canada, Mexico and South America for high-growth data services including broadband access, government connectivity and corporate networks. Video services include Occasional Use capacity, DTH and DTT.

A semi-hemispheric C-band beam provides groundbreaking coverage from Alaska to Peru. This is optimised for services including mobility, cellular backhaul and trunking, video distribution and government services.

The EUTELSAT 115 West B satellite is of particular interest to ISPs, aeronautical, maritime, oil & gas, telecom operators and government agencies, as well as news, sports & entertainment broadcasters.

Manufactured by Boeing Defense and Space, EUTELSAT 115 West B is the first all-electric satellite of our fleet.
