SATELLITE
Satellite Manufacturer: Alcatel Space
Launch Date: 05/07/2002
Orbital Position: 5 degrees West
Frequencies: C-band, Ku-band
EUTELSAT 5 West A

Ku-band Widebeam Downlink Coverage

Exceptional connectivity for broadcast and telecoms services

With its mix of Ku and C-band frequencies, EUTELSAT 5 West A is a high-powered spacecraft, providing an exceptional range of connectivity combinations.

EUTELSAT 5 West A offers two-way broadband internet access, broadcast services and corporate networks to large audiences. The satellite also plays a key role in the network infrastructure being deployed across Europe and the Mediterranean Basin for the digital switchover, distributing digital terrestrial television (DTT) signals to head-end transmitters.

The satellite features a Euro Mediterranean superbeam coverage, a unique pan-Atlantic widebeam coverage encompassing the Americas, Africa and Europe, and a steerable antenna that can be pointed over any one of these regions, including the Middle East.

EUTELSAT 5 West A also offers C-band capacity, an important asset for serving the pan-African market and the Caribbean.
